Available full-time for the summer internship, 27 May – 27 Jul 2027

SUMMARY

- Penultimate-year Quantitative Finance student seeking to apply market data analysis, Excel modelling and research reporting to commodity trading analytics.

EDUCATION

Singapore Management University — Singapore

Bachelor of Business Management, Quantitative Finance (penultimate year) — *Aug 2024 – May 2028 (Expected)*

EXPERIENCE

Bank of China (Singapore Branch) – Global Corporate Banking — Singapore

Relationship Manager Intern — *Aug 2026 – Present*

- **Data management:** collected and kept accurate quarterly balance sheet, income statement and cash flow data from company announcements into the team's Excel template, tied out totals, and flagged a shifted % change column and a formula that could not be reproduced.
- **Attention to detail:** mapped overseas subsidiaries' audited IFRS financials into the bank's credit template line by line, used subtotal tie-outs to catch entry errors, and corrected calculation and input errors in an earlier version.
- **Market study:** researched 12 Belt and Road projects across 9 countries, including a refinery, ports and a hydropower plant; gathered deal size, capital structure and lead-bank data and ranked them in a self-built three-tier framework; **endorsed by the team lead**.
- **Research and reporting:** wrote English industry reports on Thai data centres and on social media and digital advertising (market size, trends, competition, policy risks), **both used by colleagues in lending decisions**.
- **Decision support:** wrote the news and risk brief used at the team's decision meeting on a syndicated loan to a global technology group; updated the comparison against two US competitors and caught **several data errors**.
- **Ad-hoc analysis with market data:** traced a company's swing to an investment loss to a listed stake whose share price fell; rebuilt the loss independently and **matched the reported figure exactly**.
- **Communication:** coordinated with the risk team and overseas branches, tracking about 20 documents in a self-built Excel tracker in a fast-paced team.

PROJECTS

Jetstar Asia – Customer Satisfaction Statistical Analysis — SMU Statistics, individual project

- Ran correlation and regression on survey data for 6 factors, identified comfort (r = 0.64) and ease of booking (r = 0.63) as the main drivers, and compared three airlines with 95% confidence intervals.

Kweichow Moutai – Self-study Valuation Model — Personal

- Built a linked three-statement model, DCF and comparables in Microsoft Excel from the filings; reported a valuation range, since terminal value made up about 80% of enterprise value.

Heineken N.V. – Equity Research — SMU, 5-person team

- Built the DCF (WACC 5.72%), cross-checked with a three-stage DDM and 9 comparables; team call **BUY** at €75.23 (11% upside), with a two-factor sensitivity on cost of equity and terminal growth.

StarHub vs Singtel – Financial Statement Analysis — SMU, 9-person team

- Covered cash flow, liabilities and equity: ROE 21.0% vs 3.15%, collection days 40 vs 129; flagged a roughly 65% fall in Singtel's interest cover.

SKILLS & CERTIFICATIONS

- **Tools:** Microsoft Excel (modelling, data analysis), SQL (proficient), Power BI (basic dashboards), Python (basics), S&P Capital IQ
- **Certifications:** Bloomberg Market Concepts (BMC), Bloomberg Finance Fundamentals (BFF)
- **Languages:** Mandarin (native), English (professional working proficiency; wrote reports in English at work)
